

# CARTRIDGE GAS FILTER

## Type GS and Z

The filters are suitable for gases in accordance with DVGW Code of Practice G 260 / G 262 and neutral non-corrosive gases. According to 2014/68/EU

## PRODUCT DESCRIPTION

Type "GS and Z" cellular gas filters are designed for retaining gas impurities, such as dust, rust and other solid particles, in gas-carrying lines at a defined location. They are mainly used in gas pressure regulating and measuring stations, power plant and upstream of equipment, the function of which would be impaired by contaminants. The filters are suitable for gases in accordance with DVGW Code of Practice G 260 / G 262 and neutral non-corrosive gases. (Other gases on request).

- Outdoor version as standard
- Easily replaceable filter cartridge with hydrophobic filter medium
- Optimized flow control ensures high filtration efficiency
- Optionally available with differential pressure measurement  
(for electric remote transmission , differential pressure gauge with limit switch)

Suitable for stations in gas transmission, LPG, LNG and CNG facilities.

Suitable for gas pressure regulator all small, medium and high capacity boiler plant (Hot water boiler, steam boiler, hot oil heaters, etc...)

Suitable for process combustion system and all pre-burner gas trains

**Cartridge Filter**

## TECHNICAL DATA

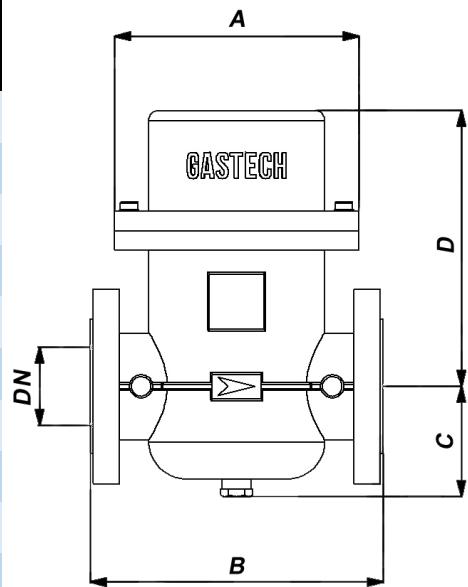

Type	GS	Z
<b>Maximum permissible pressure (PS)</b>	25 bar	50 bar
<b>Nominal Size</b>	from DN25 – DN300 (1" – 12")	from DN25 – DN300 (1" – 12")
<b>Connections</b>	Flanged to DIN PN16 or ANSI Class 150 RF	Flanged to DIN PN40 or ANSI Class 300 RF
<b>Temperature Range</b>	Operating and ambient temperature -20 °C to +70 °C (Optional -40 °C )	
<b>Body - Cover Materials</b>	DN25 – DN100 Spheroidal Graphite Iron DN125-DN300 ASTM A 106 Gr B	DN25 – DN100 Cast steel DN125-DN300 ASTM A 106 Gr B
<b>Sealings</b>	NBR	NBR
<b>Approximate ΔP value for filter cartridge change</b>	800 - 1000 mbar	800 - 1000 mbar
<b>ΔP max limit for soiled filter cartridges</b>	2000 mbar	2000 mbar
<b>Filtration efficiency</b>	Standard 99.9% of particle size > 2 µm	
<b>Filter Area</b>	see pages 4	
<b>Pressure Volume</b>	see pages 4	
<b>Testing</b>	DIN 3386, DVGW worksheet G 498 and DIN 30690-1	
<b>CE-mark acc. to PED and PIN-Nr.</b>	CE1783	612-PED-062/2014-01
<b>Explosion protection</b>	Mechanical components of regulator do not contain a potential ignition source, thus do not fall in limits of ATEX 95 (94/9/EG). (Used electronic accessories comply with ATEX-demands.)	

**Cartridge Filter**

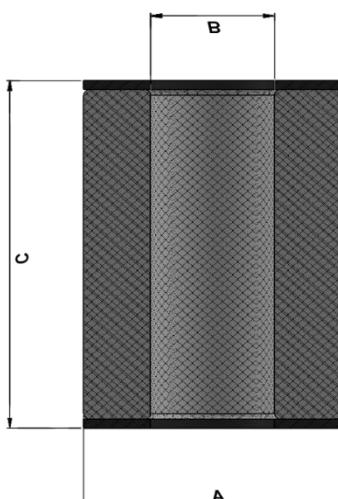

## DIMENSIONS AND WEIGHT

SIZE	A (mm)	B (mm)	C (mm)	D (mm)	INTERNAL VOLUME (lt)	WEIGHT (kg)

**Flow with Other Gases**

In the tables above, the flow is in Nm<sup>3</sup>/h natural gas with a density 0.61 and temperature 15°C. To convert to other gas flow, using the following formula:

$$Q (\text{Scm/h Natural gas}) \times Fc = Q (\text{Scm/h Xgas})$$

**Example:**

$$Q (\text{Scm/h Natural gas}) \times 0.78 = Q (\text{Scm/h Air})$$

$$1 \text{ Scm/h Natural gas} = 0.78 \text{ Scm/h Air}$$

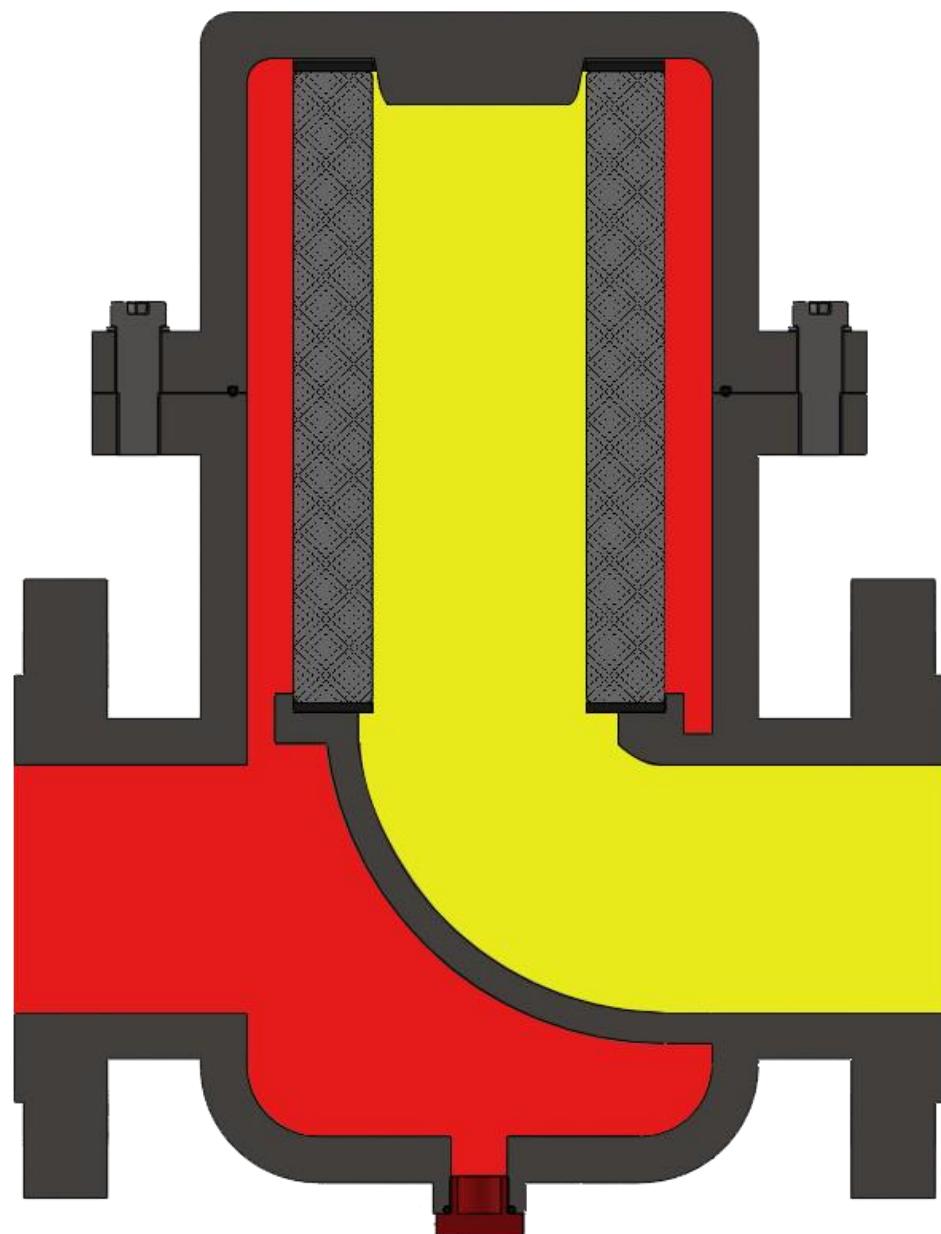

Correction Factor Fc at 15°C	
Propane	0.64
Butane	0.55
Oxygen	0.76
Air	0.78
Nitrogen	0.81
Biogas	0.85
Town gas	1.23
Hydrogen	3.04

## OPERATING AND MAINTENANCE INSTRUCTIONS / SPARE PARTS

### 1. General information

All persons involved with the assembly, operation and / or maintenance of the gas cell filter must read and understand all of the following documents:

- Technical product information «GS-Z» – this GASTECH document contains the equipment's technical data and dimensions as well as instructions concerning set-up and mode of operation.
- General operating manual for gas pressure regulators and safety devices – this GASTECH document contains information on assembly and operation as well as general information on troubleshooting.
- Operating and maintenance instructions / spare parts (ct14-2016-r2) – this GASTECH document contains more detailed information on assembly and operation of the gas cell filter.

There are national laws and regulations for all sorts of jobs on gas pressure governors, from planning to maintenance.

Inspection and maintenance intervals depend mostly on operating conditions and the nature and properties of the gas. There are no general rules or recommendations for intervals. For Europe , we recommend to consider maintenance intervals as stated in DVGW work sheet G 495 in a first instance. However, in the mid-term, intervals must be adapted to the requirements of each specific equipment.

During maintenance, components must be cleaned and then checked thoroughly. This is necessary even if there have not been any unusual observations during operation and / or functional testing. Checks must cover, in particular, filter insert and the sealing rings.

Any and all defective parts must be replaced with new ones. The same applies to O rings removed during disassembly. Do not use any spare / wear parts and / or oils & lubricants not specified in the GASTECH operating and maintenance instructions for spare parts. In the event spare / wear parts and / or lubricants & oils other than those specifically recommended are used, GASTECH shall not be held liable for any defects and / or consecutive damages attributable to such use of illegal parts, lubricants, oils etc.  
Item numbers mentioned in the specific operating and maintenance instructions correspond with the numbers in the spare parts lists and drawings.

Some parts in the lists and drawings are marked with a letter "W". We recommend to always have a reserve of those parts in stock for maintenance purposes.

Those spare parts are put together in another separate list at the end of the spare parts list.

**Cartridge Filter**

**OPERATING AND MAINTENANCE INSTRUCTIONS / SPARE PARTS****1.1 Safety information**

In this manual, safety information is highlighted by means of the following signal words and eye catchers:

Danger to life and limb

Danger of damage to property and / or the environment

Important additional information

**2. Specific maintenance instructions**

During maintenance, components must be cleaned and checked visually. Be thorough.

Carry out a functional check: measure a pressure drop in the resistive gas flow.

Limit value for dirty filter insert is 0.5 bar

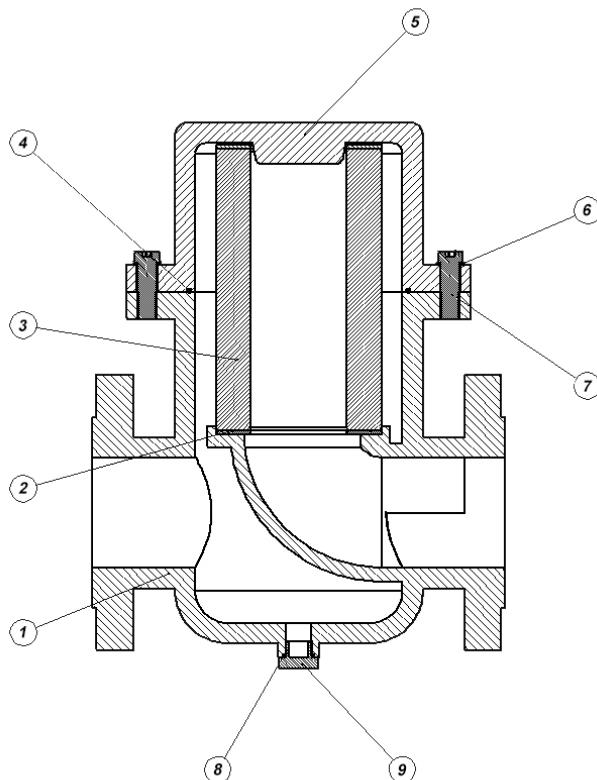

- \* Clean the filter mesh. Or replace the filter insert altogether.
- \* Grease the O rings according to the lubricant table.
- \* Apply grease sparingly. Replace damaged sealing rings.
- \* Tightening torques for fixing the hood: Be sure to observe indications given in the table “Tightening torques”.

## DESING and FUNCTION

Gas flows through the inlet flange into the filter body. The filter area which is up to or more than 100 times larger than the cross-section of the inlet flange reduces the velocity of the gas flow accordingly. The dust particles carried along with the gas are retained by the filter element. The cleaned gas is discharged through the outlet flange.

A filter mainly consists of a body (1), a lid (5) and a filter cartridge (3). The filter cartridge can be easily accessed for maintenance or replacement by removing the lid. The filter cartridge comprises a filter basket and a filter element. A filter cartridge with an appropriate pore size according to the application and the particle size to be filtered should be used. The filter cartridge is sealed by two sealing rings which are mostly integrated within the filter cartridge.

The cover (5) on the underside of the filter allows a comfortable distance incurred residues.

### 3. Changed Filter Cardridge

- a. Must drain the gas line.  Danger
- b. (6) Unscrew bolts with suitable allen key.
- c. Cartridge(3), Cover Sealing O-ring(4), Particules Sealing Ring(2) Unplug respectively.  Caution  
Change the with new parts.
- d. (6) Turn the screws clockwise, until the required torque
- e. Open the gas slowly. Close all valves and waiting 20 minutes. For leakage test.  Danger

Note

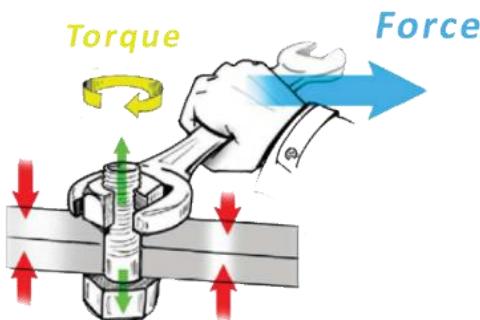

Must use Silicone grease for Cover Sealing O-ring
